

COPON CASE HISTORY

PROJECT: RAILTRACK - BATH SPA STATION
TITLE: ROOF SUPPORT COLUMNS

A desire to conserve structures in accordance with Bath City's Regency heritage led Railtrack and their main contractors to restore rather than replace these ornate cast iron roof support columns. Reflecting the original character of the building, the columns were sympathetically renovated with particular emphasis on below ground corrosion protection.

Copon Hycote 152 LV High Build Solvent Free epoxy was selected for its RT98 accreditation, marginal surface preparation and moisture tolerance.

CLIENT: RAILTRACK
CONTRACTOR: HOCHTIEF

Other structures where Copon Hycote 152LV has been successfully utilised:

Victoria Station - Railtrack Dec 2000

Harrow Bridge - Railtrack March 2000

Manningtree Bridge - Railtrack March 2000
