

COPON

CASE HISTORY

PROJECT: VICTORIA STATION LONDON
TITLE: ROOF SUPPORT STRUCTURE

Maintaining the original character of this most notable of London's landmarks became a prime consideration in selecting the best possible approach to restoring this roof structure. Timetables required that the busy traffic of the station should continue with minimum inconvenience to passengers. Consequently, applications were carried out during strictly limited possession times.

Copon Hycote 152LV, a high build solvent free epoxy was selected for its RT98 accreditation, marginal surface preparation and moisture tolerance. Application contractors, UK Euro Protective Coatings, were highly impressed by the speed of cure and ease of application enabling them to complete this work ahead of schedule.

Other structures where Copon Hycote 152LV has been successfully utilised:

Bath Spa Station – Railtrack Dec 200

Harrow Bridge – Railtrack March 2000

Manningtree Bridge – Railtrack March 2000

Ely Bridge – Railtrack October 2000

Settle Station Footbridge – Railtrack May 1999

Brookenhurst Railbridge – Railtrack October 1997

Padge Railbridge – Railtrack October 1995
