

# COPON

## CASE HISTORY

**PROJECT TITLE** SCOTRAIL - 53 MARK III SLEEPERS - INTERIOR REFURBISHMENT OF HST VESTIBULES AND TOILETS

Fifty three Mark III Scotrail sleeper coaches required a major interior upgrade which included the refinishing of the vestibule areas and toilets.

The coating had to be highly durable in terms of long term maintenance free coating protection, impact resistant and capable of repetitive cleaning. In addition, the coating system required excellent limited fire hazard

performance.

Copon Hycote PUWB Finish Colour was chosen which meets each of the above requirements, as well as being environmentally friendly and safe to apply.

Copon Hycote PUWB Finish Colour is a one coat fast drying coating system. It is excellent when applied directly to abraded substrates such as phenolic or polyester GRP, formica and other similar laminates.

The refurbishment work was carried out by WS Atkins at Inverness Depot, who achieved an excellent standard of finish, with which the client was extremely pleased.
