

## 3M™ VoiceScript™ Software

- Dictate anywhere, anytime
- Give providers more control
- Create documents in seconds
- Increase accuracy of associating patients with dictations to improve productivity

### Dictate. Create. Disseminate.

**3M VoiceScript** automates dictation technologies and centrally manages the voice files. It can help increase provider productivity, decrease document turnaround time, improve document accuracy, and give you more time for patient care.

### 3M VoiceScript:

- Manages dictation and transcription with a single system design
- Dramatically decreases the time care providers spend completing documentation
- Offers a choice of dictation methods—PC, analog phone or PDA device—that can be used from anywhere
- Helps reduce cost of ownership with scalable technology and a centralized database
- Serves as the input and voice management system for 3M's speech recognition suite

### 3M VoiceScript mobile:

- PDA-based application for mobile dictation
- Uses flash-based memory to help prevent loss of dictation and data
- Enables care providers to quickly and easily find patients
- Flexible network connection options integrate with workflow
- Operates via wireless network or standard synchronization functionality

### 3M VoiceScript at work

#### **Bloomsburg Hospital hits “all-time high on satisfaction,” gets current on radiology dictation in one day**

Before installing 3M VoiceScript, the transcription department at Bloomsburg Hospital in Pennsylvania was becoming increasingly frustrated with the performance of its legacy system. According to Michael Sutton, Bloomsburg's IS consultant, the deciding factor in going with 3M VoiceScript was that it was “engineered to last ... and we simply couldn't afford to replace the equipment in two years. We needed to get it right.”

Bloomsburg quickly reaped the benefits of 3M VoiceScript, realizing improved reliability, multiple dictation options, tight integration among 3M products, and the ability to manage document routing right at the workstation. Bloomsburg reduced its radiology reports backlog and became current in one day. The facility also reduced a 30-day backlog of discharge summaries to less than three days.

# 3M™ VoiceScript™ Software

## Features

- True network voice and text solution
- Unlimited number of configurable ports
- Unlimited storage allowing you to manage multiple voice servers with one system
- Complete control of workflow with user-defined priorities and access rules that drive routing
- Intuitive administrative functions prompts providers with patient's name upon ID entry so they don't have to dictate it and transcriptionist won't waste time having to look it up

## Integration

When 3M VoiceScript is integrated with additional 3M product offerings in document creation and document management, care providers can become more productive, increasing the amount of time available to focus specifically on patient care. 3M VoiceScript integrate with:

**3M™ Electronic Signature Authentication Software**—Permits full PC-based signature on transcribed documents.

**3M™ ChartScript™ Software**—Transcription and distribution system provides complete voice to text solution with seamless access to dictation jobs through an integrated digital player.

**3M™ ChartLinc Software**—Interface to your mainframe system.

**3M™ ChartID™ Software**—Accesses patient data for positive identification of dictation jobs.

**3M™ ChartFact™ Software**—Updates physician deficiencies upon dictation completion.

## Reporting

- Create custom reports like turnaround reports, or reports on individual MT productivity
- Calculate turnaround time between any two intervals in the document creation process

## Security

To maintain appropriate access to sensitive data, 3M applications provide user-specific security features:

- Individual user ID and password logon
- Automatic logoff after user-defined period of system inactivity
- Facility-defined user access levels and assignments, including the ability to block access based on specific record characteristics, such as patient type
- Audit trail capabilities within the application to provide detailed information about user activity
- Integration with security features of industry-standard servers and databases to capture additional audit data

## Technology

Built on platforms designed to enhance current operating environments while remaining open to future technology, 3M solutions are:

- Compatible with industry-standard technology, such as Microsoft® Windows® 2000 and XP
- PIPEDA-enabled applications that operate using today's standard workstation and networking technology
